ABOUT ME

My name is **Francis McGuire** and my passion is software. I have been working in the IT sector for over **12 years**. I love everything about computers, from system administration to software development. I also love creating great products. Nothing makes me prouder than seeing my projects enjoy their due success. The bulk of my development experience is with PHP5 web applications. I have experience developing back ends for complex web applications using technologies such as web services. I have also developed many dynamic front ends using jQuery. I am an expert with Apache based web servers and have configured complex web architectures using clustering technologies.

After years of managing product development from the inside, I have now transitioned to the role of product owner(manager). I've been responsible for managing up to 4 development and design teams simultaneously. I thrive on challenging problems and love seeing projects come to completion.

I have managed many projects and am skilled at estimating their cost and length. I can read, write and speak in both English and French. I am great at communicating with clients in order to provide them with a customized service.

SKILLS

LANGUAGES

PHP5	10 years
HTML	7 years
CSS	7 years
JavaScript	8 years
jQuery	6 years
PERL	2 years
SQL	10 years
bash	10 years

EXPERIENCE

Les Technologies Seedbox, Product Owner, started October 2014

Here is a list of some of the tasks I've performed while working at Seedbox:

- Manage the product backlog for Agile teams
- Write and validate user stories
- Worked on over 100 content driven websites
- Participate and lead Agile ceremonies
- Work with stakeholders on establishing the most valuable priorities
- Calculated the approximate sprint ROIs
- Managed multiple teams simultaneously
- Managed product roadmaps and timelines
- Worked on critical systems managing thousands of credit card transactions every day

Les Technologies Seedbox, Tech Lead, September 2013 - October 2014

Here is a list of some of the tasks I performed while working at Seedbox:

- Help grow my development team from 1 developer to 5 developers
- Train and help newer team members integrate within the team
- Worked on over 100 content driven websites
- Worked in a scrum environment
- Developed multiple content driven sites from scratch
- Worked in a high performance environment
- Worked on site getting millions of visits each day
- Was the first to use new technologies provided by the platform team, providing feedback and testing a product at a very early stage
- Worked in a 100% Linux environment
- Worked on critical systems managing thousands of credit card transactions every day

Les Technologies Seedbox, Senior Web Developer, February 2011 - September 2013

Here is a list of some of the tasks I performed while working at Seedbox:

- Worked on over 100 content driven websites
- Worked in a scrum environment
- Developed multiple content driven sites from scratch
- Worked in a high performance environment
- Worked on site getting millions of visits each day
- Was the first to use new technologies provided by the platform team, providing feedback and testing a product at a very early stage
- Worked in a 100% Linux environment
- Worked on critical systems managing thousands of credit card transactions every day
- Used caching technologies extensively

BLSOL, Intermediate web developer & web server administrator, September '08 - February '11

Clients included Airborne Mobile, Conservative Party of Canada, Pratt & Whitney Canada, EM Agency, Securiglobe.

Here is a list of some of the tasks I performed while working at BLSOL:

- Developed over 50 websites using PHP based solutions
- Designed the data structure for many projects
- Managed Apache based web servers
- Managed many projects
- Helped the sales team close on deals by providing technical advice to the clients
- Designed a complex web server architecture for a high volume application using clustering technologies
- Implemented caching technologies to web applications in order to improve the performance for high volume sites
- Helped maintain, update and fix many Linux based production environments

Net Communications, Junior Web Developer, April '07 - September '08
Clients included canoe.ca, CBC, city of Longueuil, TVO, Tripping the Rift, Videotron, Look communication.

Here is a list of some of the tasks I performed while working at Net Communications:

- Developed over 10 websites using PHP based solutions
- Developed web applications using Perl based solutions
- Managed and helped develop a large scale web project for canoe.ca
- Developed object oriented web applications using Zend Framework
- Developed applications using a Service Oriented Architecture

Net Communications, Customer Support Representative, October '05 - April '07

I did technical support and Linux system administration for an Internet service provider.

Here is a list of some of the tasks I performed while working at Net Communications:

- Provided technical support for DSL, dial-up, cable, radio frequency and satellite based Internet service to thousands of customers
- Helped maintain Linux based server used to power an ISP
- Integrated content into a web based content management systems
- Developed dynamic front-ends using AJAX
